

A wind microphone generates electricity

Certain crystals and ceramics, known as piezoelectric elements, can generate electricity when exposed to sound waves. When sound waves strike these elements, they deform, creating an electric charge. ...

Every day, wind turbines capture the wind's power and convert it into electricity. It's a fairly simple process: When the wind blows the turbine's blades spin, capturing energy - this energy is then sent through a gearbox to a generator, ...

acoustic noise generated by wind turbines causes a major environmental impact. This issue was first discussed in Europe in the 1980s, and became clear with large-scale wind power ...
