

# Are there any horizontal seams when installing photovoltaic panels

Should a solar panel be installed horizontal or vertical?

However, it is more efficient to have a consecutive block of solar panels installed using the same orientation--either vertical or horizontal. If there is a break in your roof, or you have room for one more solar panel, then your solar contractor can install the solar panel to fit the space.

Can solar panels be installed vertically on a roof?

The size of solar panels makes them well suited to be installed vertically on most roofs. Of course, not every home--or roof--is designed the same. Depending on the climate, your roof's construction, and your solar energy needs, horizontal solar panel installation may be the right choice for your home.

Can solar panels be installed on a standing seam roof?

One last thing to consider when installing solar panels to a standing seam roof is how to get the cable inside. Two of the most common options are one, to drill a hole into the roof and weather back in using a specialist cable inlet product.

How do you mount solar PV systems to a seam roof?

Mounting solar PV systems to a seam roof is relatively straight forward and fast, which reduces install time and decreases labour costs. The clamps are secured directly over the seam which is then fastened with a screw at the side, the rail then connects directly to the clamp using a hammerhead bolt and L-Adaptor.

Can solar PV systems be installed on a pitched roof?

The guidelines also say that provision must be made for ventilation behind the solar PV modules to provide cooling. With the introduction of MCS012 in March 2012 we would now expect all MCS certified installers of solar PV systems to install solar PV systems on pitched roofs using only MCS012 certified roof fixings.

Are horizontal solar panels a good choice for your home?

Depending on the climate, your roof's construction, and your solar energy needs, horizontal solar panel installation may be the right choice for your home. The amount of direct sunlight could impact the direction in which your solar panels are installed.
