

How many electric car charging stations will be installed in Armenia?

YEREVAN, March 10. /ARKA/. Team Telecom Armenia will install over 70 charging stations for electric cars this year all over Armenia as part of its Team Energy project, Team Telecom Armenia CEO Hayk Yesayan told a press briefing on the sidelines of the DigiTec 2022 Summit and Expo that kicked off today in Yerevan.

Can Armenia produce electric cars?

The Minister of Environment wants to see Armenia as a country producing electric cars and an active participant in the Global Electric Mobility Global Program.

Why are EVs becoming more popular in Armenia?

These vehicles have become increasingly popular, now that the main barriers - the purchase price and their limited range due to high battery costs - have been overcome through the introduction of more affordable, long-range EVs into the Armenian market.

What are the energy development programmes for Armenia?

Based on this study, the Least Cost Generation Plan and the Comprehensive National Energy Strategy and Energy Sector Improvement Action Plan were developed in 2006 and updated in 2014. On the basis of the aforementioned documents, the Government adopted several energy development programmes for Armenia.

Are there free charging stations in Armenia?

We are proud to note that in 2019, within the project PLUG.am implemented by the Armenian Energy Agency, completely free charging stations were installed in the regions. Today there are already dealers who are officially importing only electric vehicles. The manufacturing of these cars contains more innovation and technology than machinery.

What is the goal of the Armenian Energy Agency Foundation?

Our goal is to expand our network of charging stations, including communities and interstate highways. In an exclusive interview with Environment Minister Eric Grigoryan, we have identified two points directly related to the activities of the Armenian Energy Agency Foundation: Today's situation:

The public network of EV charging stations in Armenia consists of fewer than 30 stations with medium-level charging speed. Almost 90% of EVs are charged at home. In order to start developing commercial EV charging stations, a critical number of 4,000 EVs would be required, according to the "plug.am" project.

However, electricity, which is necessary for powering electric mobility, can and should be generated predominantly from renewables. Currently Armenia's energy is generated from ...

The Government of Armenia will switch to using electric vehicles in the nearest future. The project will be

Armenia evs energy

implemented through environmental grant funds provided by the Global Environment Fund. The Ministre of Environment wants ...

Team Energy builds a national network of charging stations for EVs on the territory of Armenia. Our mission is to give EV drivers in Armenia an unprecedented opportunity to be able to charge their vehicles, travel in the whole territory of Armenia thus contributing to an even development of ...
