

Benefits of using solar power on the roof

How do solar panels work on a flat roof?

Solar panels work best when angled towards the sun, so panels on flat roofs are normally tilted up to help maximise energy production. It's important that any solar panel system maintains the integrity of the roof covering to keep it watertight. For this reason, many systems are weighted down rather than fixed through the roof covering.

Should I install solar panels on my roof?

It's important to consider the pros and cons of solar panels on your roof before you decide if a solar panel installation is right for you. Solar panels offer a compelling mix of environmental benefits and financial incentives. However, the initial costs and practical concerns merit consideration.

Do solar panels need a slanted roof?

You have to position solar panels properly to achieve the highest energy production. The optimal orientation and angle usually require a slanted roof that faces the sun. Some roofs have a unique shape that might not accommodate rigid, flat panels. For those homes, flexible solar panels can be a good workaround.

Why should you install solar panels?

Installing solar panels lets you use free, renewable, low carbon electricity. You can sell surplus electricity to the grid or store it for later use. According to low-carbon certification organisation MCS, there were more than 183,000 solar panel installations across the UK in 2023.

What are the benefits of solar power?

We will start with an obvious benefit: saving money. If you are generating your electricity via the sun, your electricity bills will immediately be lower because you will consume less power from the grid. Solar power works in two ways, either on-grid or off-grid.

Which roof is best for solar panels?

Roof space, which is the same as about two car parking spaces. A south-facing roof is ideal for generating the most electricity from the sun, but panels facing east or west can also work well. North-facing roofs aren't recommended. If you don't have enough sloping roof space, you could install solar panels
