What equipment do I need to go solar?

We'll break down everything you need to know about solar equipment to prepare you. You need solar panels, inverters, racking equipment, and performance monitoring equipment to go solar. You also might want an energy storage system (aka solar battery), especially if you live in an area that doesn't have net metering.

What are the components of solar equipment?

Among the solar equipment, we also find several of the key components, such as solar panels, inverters, and racking systems. Solar panels are the components that harness and store the energy produced by the sun. Photovoltaic solar panels (PV), are composed of silicon semiconductors, which capture energy from the sun's rays.

What is solar energy equipment?

Solar energy equipment consists of the components that make up a solar energy system. The installation of the equipment allows for the harnessing of the sun's energy as well as its conversion into the electricity that is necessary for the home or business in question.

Which mounting equipment is best for a solar carport?

There is also mounting equipment that is ideal for ground mount solar and solar carports, which can both serve the same purpose of maximizing the angle of the panels for sunlight exposure. With ground-mount solar, you can choose between fixed and track mounts.

How do photovoltaic solar panels work?

Photovoltaic solar panels (PV), are composed of silicon semiconductors, which capture energy from the sun's rays. The process is named the photovoltaic effect. When exposed to the sun, PV solar panels produce energy in the form of a direct current charge, which can be measured in a unit of watts. You can learn more about how solar panels work [here](#).

How do utility scale photovoltaic systems work?

Utility scale photovoltaic (PV) systems are connected to the network at medium or high voltage levels. To step up the output voltage of the inverter to such levels, a transformer is employed at its output. This facilitates further interconnections within the PV system before supplying power to the grid.
