

Which energy sources are used in Latvia?

Latvia has underground gas storage facilities at the Incukalna UGS, with a capacity of 4.47 billion m<sup>3</sup>. Natural gas companies include Latvijas Gaze. Renewable energy includes wind, solar, biomass and geothermal energy sources. Almost half of the electricity used in the country is provided by renewable energy sources.

Will electricity be the cornerstone of Latvia's energy transition?

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the target of 57% renewables in total final consumption by 2030.

How much electricity does Latvia use per capita?

In 2018, electricity consumption per capita was 3731 kWh. Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030. The 2021-30 plan set a target of reducing greenhouse gas emissions by 65% compared to 1990. There is a target of being carbon neutral by 2050.

Is biomass a source of electricity in Latvia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Latvia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

What are the different types of energy transformation in Latvia?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Latvia for 2022. Another important form of transformation is the generation of electricity.

How can wind and solar power projects help Latvia?

Bringing wind and solar power projects online will also help reduce Latvia's dependence on natural gas imports and can contribute to lower electricity prices; current efforts to develop offshore wind will support this outcome.

Latvia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the ...

Head of Lithuania and Latvia Marthen Kummer Business Development Manager Martins Zvaigzne Head of Commercial Julia Solkova Finance Manager Baltics Sniedziet energiju savam ...

Latvia's 2020 National Renewable Actions Plan targets a 40% share of energy generated from renewable sources in gross final energy consumption, 53% of heat consumption met by renewable sources and 60% of

electricity demand met by electricity generate

EENergy - Enterprise Europe Network Energy grants for European SMEs (Eiropas Biznesa atbalsta tikla energijas granti Eiropas MVU) 9 miljoni eiro 900 grantu forma Eiropas mazajiem un videjiem uzņēmumiem iniciatīvām energoefektivitātes celšanai vismaz par 5% sadarbība ar Eiropas Biznesa atbalsta tiklu Vienota tirgus programmas ...

Latvia is a net energy importer. Primary energy use in Latvia was 49 TWh, or 22 TWh per million persons in 2009. [1] In 2018, electricity consumption per capita was 3731 kWh. [2] Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030. [3]

Latvia's energy system is largely based on renewable resources, primarily hydropower from the Daugava River, supplemented by wind, solar, and biomass. While natural gas imports cover energy shortages, the country aims to increase wind and solar energy capacity, with significant progress already made in 2022.

This Energy Policy Review was prepared in partnership between the Government of Latvia and the IEA. It draws on the IEA's extensive knowledge and the inputs of expert peers from IEA member countries to assess Latvia's most pressing energy sector challenges and provide recommendations on how to address them, backed by international best ...
