

The Guinea-Bissau Solar Energy Scale-up and Access Project will work on the development of solar energy generation and network enhancement, including the preparation and implementation for utility-scale ...

HEADLINE: Supply and installation of a 140KWp Solar System at the UN House in Guinea-Bissau.
Description: In a notable stride towards sustainability, the UN House in Bissau has embraced a 140 kWp solar installation, successfully completed in 2023. Designed to amplify the utilization of clean energy sources and minimize CO2 emissions, this solar ...

Transforming Guinea-Bissau towards an inclusive, sustainable economy requires establishing an enabling environment for private investments and providing essential infrastructure and services, including electricity.

Learn about the World Bank's \$35 million grant to Guinea-Bissau for a solar energy project aimed at enhancing electricity access and sustainability through solar power generation and infrastructure development.

The Guinea-Bissau Solar Energy Scale-up and Access Project will work on the development of solar energy generation and network enhancement, including the preparation and implementation for utility-scale solar parks and upgrade and expansion of solar grid infrastructure.

In the regions of Bafatá, Gabú, Quinara and Tombali, were implemented homemade Solar Photovoltaic Systems in 2011, with the support of the Foundation Rural Energy Services and financed by subvention from the European Commission

The Solar Energy Development and Electricity Access Project will involve constructing several solar power plants and battery storage units with participation from the private sector. A 30 MW solar power plant will be built near the capital, Bissau. This aims to reduce the average cost of electricity and diversify the energy mix.

A 30 MW solar power plant will be developed near the capital, Bissau, to reduce electricity costs and diversify the energy mix. Battery storage will initially help stabilize the power supply and later offer additional services to the electricity system, according to the Ministry of the Economy, Planning, and Regional Integration of Guinea-Bissau.

The massive solar and storage project in Guinea-Bissau is set to revolutionize the country's energy sector. With over 200 hectares of land dedicated to solar panels, the project will provide electricity to over 250,000 people in Guinea-Bissau.
