

How much energy does Honduras use?

The total primary energy offer in Honduras is around 4.62 Mtoe or 53,730.6 GWh. The main source of primary energy is petroleum (53%) followed by combustible renewable and waste (44%), and coal (3%). The residential energy consumption is around 47% of the national consumption, of which 86% are provided by biomass, primarily firewood.

Does Honduras use biomass?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Honduras: How much of the country's energy comes from nuclear power?

Does Honduras need a new infrastructure?

However, national renewable energy and sustainable development ambitions in Honduras face important infrastructure constraints. For example, significant investment is needed to enhance the quality of energy and water services, including improvements in coverage and connectivity.

Why should Honduras invest in energy resources?

The population of Honduras suffering from poverty will be directly benefited by the resources generated by promoting the best use of the country's energy resources and the proper positioning of government resources. Additionally, this would reduce conflicts in the installation of generation and T&D plants, which results in lower electricity costs.

Does Honduras need a 'energy Emergencia'?

Access to electricity in rural areas needs to be improved. In June 2007, the president of Honduras, Manuel Zelaya, declared an "energía emergencia". An Intervention Board (Junta Interventoria), headed by the Minister of Defence and the Minister of Finance, was temporarily put in charge of ENEE to address the crisis.

How will energy deficiency affect the population of Honduras?

The Honduran population will have a better availability of reliable data on energy deficiency. The population of Honduras suffering from poverty will be directly benefited by the resources generated by promoting the best use of the country's energy resources and the proper positioning of government resources.

Honduras is a regional leader in solar energy, with roughly 11% of electricity provided by photovoltaics in 2018 and 2019. As of 2016, the country ranked first in Central America for installed solar capacity and third in Latin America behind Chile and Mexico. Honduras aims for 80% of its energy matrix to be from renewables by 2038.

3 ???&#0183; Honduras's coup-era government opened the floodgates for predatory energy projects. Now that Hondurans are fighting back, the companies are trying to take them to arbitration. By Marcia Perdomo | December 12, 2024 The impoverished country of Honduras pays some of the highest electricity prices in Latin America, which adds to the high cost of ...

In its Energy Roadmap 2050 and National Plan 2010-2022, Honduras has set a target to achieve an 80% share of renewable energy in the country's total electricity generation by 2038, up from the current 60%. However, national ...

In Honduras, high rates of inefficient energy use are observed. Usually, energy efficiency standards are not implemented, there is no mandatory labeling,

The total primary energy offer in Honduras is around 4.62 Mtoe or 53,730.6 GWh. The main source of primary energy is petroleum (53%) followed by combustible renewable and waste (44%), and coal (3%). The residential energy consumption [1] is around 47% of the national consumption, of which 86% are provided by biomass, primarily firewood.

Honduras has a very large potential to develop energy efficiency programs. Large improvements could be made in the areas of air conditioning for both the residential and commercial sectors, where the implementation of measures in the area of demand management and the rational use of energy could prevent unplanned blackouts. Some progress has been made recently under the Generaci&#243;n Aut&#243;noma y Uso Racional de En...
