

# How long can the locker facial recognition be stored

Should facial recognition be used for long-term storage?

The Future of Privacy Forum, a nonprofit, suggests that organizations that leverage facial recognition must focus on privacy principles such as consent, data security and transparency. However, there are less clear guidelines when it comes to the long-term storage of this data.

Should facial recognition be a long-term data retention issue?

While legislating facial recognition is being overlooked (for now), there is a larger debate raging related to long-term data retention. When discussed together, it becomes clear that long-term storage of dynamic or static facial imagery poses both an ethical and infrastructural dilemma for organizations of any scale.

Is facial recognition a privacy hazard?

While facial recognition has gained popularity for its accuracy and speed, it raises significant privacy concerns, especially when individuals are unaware their data is being collected or used. The potential for misuse of biometric data necessitates stringent legal oversight, and this is where the GDPR comes into play.

How does facial recognition technology affect data privacy?

Facial recognition technology (FRT) has witnessed rapid development over recent years, becoming a pervasive tool in areas ranging from law enforcement to retail. As this technology becomes increasingly embedded in our daily lives, it raises complex legal and ethical concerns, particularly around data privacy.

Should facial imagery be stored long-term?

When discussed together, it becomes clear that long-term storage of dynamic or static facial imagery poses both an ethical and infrastructural dilemma for organizations of any scale. Data is often compared to oil; however, unlike fossil fuels, data is a renewable resource. It does not need to be stored and accessed indefinitely to be invaluable.

How does facial recognition work in a retail store?

Once installed, facial recognition in retail stores can collect various types of customer data, such as demographics, foot traffic, frequency of visits, and even customer moods. With enough data collected, the system can then begin to do things such as make personalized recommendations for familiar customers on screens set up throughout the store.
