

# How long does it take for the photovoltaic bracket to be certified by MCS

Do you need an MCS certification for solar panels?

There are MCS certifications available for solar panels and installers, which when combined should mean your installation goes smoothly. You should also look for products and specialists with a Flexi-Orb certification, which will ensure the same high standards. Why is the MCS certificate important?

Do solar panels need MCS or flexi-Orb certification?

It's not strictly mandatory for your solar panels to come with MCS or Flexi-Orb certification, but it's highly recommended, especially if you want to take advantage of certain financial incentives.

What if a solar product or installer isn't MCS accredited?

If a solar product or installer isn't MCS accredited, it's worth being a bit cautious. Although it's not a legal requirement for installers to be MCS accredited, consumers need to have a certificate for their solar panels if they are applying for financial funding through an incentive scheme, such as the Smart Export Guarantee (SEG).

Do commercial solar panels need MCS certification & DNO permissions?

MCS Certification and DNO Permissions: Installations intended to connect to the grid require MCS certification and DNO permissions. These are not mandatory for off-grid applications. ? Permitted Developments: Across the UK, commercial solar panels are generally classified as 'permitted developments'.

How do I know if my solar installer is MCS certified?

Checking if your solar installer is MCS certified is pretty straightforward. The MCS website has a handy database where you can search for certified installers by their name and location - just pop in their details and the site will confirm if they're registered, as well as their unique Certification Number.

Why should I get an MCS-certified solar panel?

An MCS-certified solar panel is made with high-quality materials, and performs to a certain standard. That's why it's a good idea to get an accredited panel if you're considering getting a solar panel system, to ensure that the equipment meets good standards of performance.
