

How long is the life of rooftop photovoltaic panels

How long do solar panels last?

Most reputable manufacturers offer production warranties for 25 years or more. The average break even point for solar panel energy savings occurs six to 10 years after installation. If the panels continue to produce at a high level for another 15 years after that, you will end up saving thousands of dollars during the solar panels' lifespan.

Do solar panels stop working after 25 years?

After 25 years, solar panels will be less efficient and produce less power. This doesn't mean your solar panels will stop working, but they may be less effective at powering your home and lowering your energy savings. When panels degrade to the point where they no longer produce power, they're ready to be recycled.

How much do solar panels degrade a year?

The degradation rate of solar panels is calculated as a percentage. Experts estimate that most solar panels degrade at a rate of around 0.2% - 0.5% per year. This means that the output of usable energy generated by your solar panels slowly decreases over time.

Are solar panels durable?

Solar panels are generally very durable. Most solar panels are designed and tested to withstand the elements like hail, high winds, and heavy snow loads. And thanks to their lack of moving parts, solar panel systems usually require little to no maintenance. Still, maintaining your solar panels can boost production.

Do solar panels expire?

There is technically no expiration date on solar panels. However, over time, they naturally tend to become less efficient at producing energy. Some panels can also break due to physical damage from extreme weather conditions.

How often should solar panels be replaced?

One way to keep your solar system operating at its peak is to sync up your roof maintenance with solar panel maintenance and replacement. Depending on roof shingle types, a typical roof needs to be replaced about every 25 years, which is the perfect time to potentially replace your solar panels.
