

How to install solar photovoltaic panels flat

How to install solar panels on a flat roof?

Solar panels that are mounted onto flat roofs need to be installed at a pitch that captures as much sunlight as possible, as well as keeping the panel clean. By mounting the panels at an angle of at least 10 degrees, self-cleaning is possible. Thankfully, self-standing solar panels are usually fitted at 20 and 50-degree angles.

Do I need planning permission to install solar panels on a flat roof?

No, you generally won't need to get planning permission to install panels on a flat roof - so long as you comply with all the building regulations already in place. The panels themselves need to be at least a meter from the edge of the roof, for wind loading reasons, and must not stick up over a metre from the surface of the roof.

How far apart should solar panels be on a flat roof?

However, as a general rule of thumb, you need about one metre between each row of solar panels on a flat roof. Building and safety regulations also require a minimum distance of 0.5-1m between the solar panels and the edge of the roof. Where is the best place to put solar panels on a roof?

What angle should solar panels sit on a flat roof?

As we say, the fact you get to choose the angle your panels sit on a flat roof is a huge advantage. The optimum angle for a solar panel is between 30 and 40 degrees. Roofs in the UK can be pitched between 20 and 50 degrees, with most falling between 40 and 50.
