The proposed TA will complement ADB"s existing grid strengthening investments in Turkmenistan"s energy sector while setting the foundations for future engagement in renewable energy generation, including in urban settings.

Turkmenistan: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
