

Is it cost-effective to generate electricity with solar energy

Do solar panels generate electricity?

That said, the rate at which solar panels generate electricity varies depending on the amount of direct sunlight and the quality, size, number and location of panels in use. Even in winter, solar panel technology is still effective; at one point in February 2022, solar was providing more than 20% of the UK's electricity.¹

Are solar panels a good investment?

Over the past decade, the cost of solar power has halved, making it a more attractive option for homeowners. With gas prices on a rollercoaster and climate change concerns mounting, solar panels are expected to become even more cost-effective in the future. After installation, solar panels start saving you money on energy bills immediately.

Does solar energy produce more electricity in summer?

According to Solar Energy UK, solar panel performance falls by 0.34 percentage points for every degree that the temperature rises above 25°C. Plus, the longer days and clearer skies mean solar power generates much more electricity during the summer, even if their efficiency falls slightly. Is solar energy expensive to produce?

How much does a solar panel system cost?

Solar electricity is low carbon, renewable energy. A typical home solar panel system could save around one tonne of carbon per year, depending on where you live in the UK. That's the equivalent of driving 3,600 miles, or from London to Bristol 30 times. The average domestic solar panel system is 3.5kWp and costs around £7,000.

Why should you install solar panels?

Installing solar panels lets you use free, renewable, low carbon electricity. You can sell surplus electricity to the grid or store it for later use. According to low-carbon certification organisation MCS, there were more than 183,000 solar panel installations across the UK in 2023.

What are the benefits of solar panels?

The fundamental benefit of solar panels is that they enable homeowners to generate electricity from a free energy source. Offering you energy all year round, they can help reduce your carbon footprint while reducing your electricity bills.

The amount of energy generated by a solar farm depends on the size of the solar farm in question. For instance, a 5MWp system, on average, will produce 3,553 MWh of solar power and offset 687,264 kg CO₂e by 2023. ...
