Will Elon Musk reshape the energy grid?

Here's how. Elon Musk has a radical plan to reshape the energy grid-- and it could protect against power cuts. During Tesla's first-quarter 2021 earnings call Monday, the CEO described how the firm's solar panels and batteries can work together to "operate as a giant distributed utility."

Does Tesla have energy storage?

A little under 25% of project awards it recently announced included energy storage. Tesla is building massive "gigafactories" to produce lithium-ion batteries for electric vehicles and Tesla Energy's storage solutions business, including its newest Gigafactory 3 in Shanghai, China.

Is Elon Musk a solar salesman?

In a recent internal email to Tesla employees, Musk outlined two critical year-end priorities: delivering all cars to their customers and boosting the rate of solar deployments by a significant degree. Skeptics point to a variety of other reasons why Musk may be in solar- and energy-business salesman mode, beyond the Model 3 inflection point.

Could a Tesla Powerwall battery be a 'house of the future'?

Musk has touted the benefits of solar energy plus batteries before. In October 2016, when he demonstrated a "house of the future," he showed how a Tesla Powerwall battery (a slightly modified version of the battery in Tesla cars) could pair with Tesla Solar Roof tiles to collect energy while the sun is shining and store it in the battery.

Will Tesla double its storage capacity?

In 2018, Tesla installed more than 1 GWh of storage capacity around the world. This year the company aims to double that capacity to 2 GWh. "I think there is generally a lack of understanding or appreciation for the growth of Tesla Energy," Musk said on the recent earnings call.

Can a Tesla power plant plug the energy gap?

Tesla has already made some moves toward this future. It's rolled out "virtual power plants" in South Australia, Rhode Island, Massachusetts, and other areas. In July 2018, a Tesla virtual power plant in Vermont was able to use 500 Powerwall batteries to plug the energy gap during a heatwave. Tesla solar panels with Powerwall batteries attached.
