What is molten salt storage in concentrating solar power plants?

At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWh el. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power plants and electrical energy storage.

How molten salts are used in solar power plants?

Most of the operational plants have integrated a storage unit using molten salts as the storage media, one uses combined steam/oil (Dahan Power Plant), another just steam (Khi Solar One) and one a ceramic heat sink (Jülich Solar Tower).

Can molten salt storage be integrated in conventional power plants?

To diminish these drawbacks, molten salt storage can be integrated in conventional power plants. Applications the following Tab. 4. TES can also provide the services listed following section. pumped hydroelectric energy storage (without TES) . impact. Hence, massive electrical storage including a TES is volatile renewable electricity sources.

Are molten salt power plants energy reservoirs?

This paper analyses molten salt power plants as energy reservoirs that enable us to achieve the specified goals regarding flexible energy control and storage. The topic is crucial because, at the present stage of power industry development, molten salt power plants are pioneering solutions promoted mainly in Spain and the US.

Can molten salt be used as energy storage?

The proposed design permits a 24/7 electricity production at the rated power of the turbine practically all the year-round, demonstrating the benefits of internal thermal energy storage by molten salt in supplying energy to renewable energy only grid with annual average capacity factors approaching 100%.

Why do we need molten salt reservoirs?

It should be also mentioned that molten salt reservoirs are conjugate to concentrated solar power harvesting due to the lack of additional energy conversion. Such a solution allows us broader exploitation of solar energy which is one of the few absolutely clean energy sources. This is crucial in the context of protection of the environment.
