

Nowadays, large-scale solar penetration into the grid and the intermittent nature of PV systems are affecting the operation of distribution networks. This paper aims to investigate the effect of PV penetration on a ...

If the solar PV supply oversteps the buildings involve, excess +electricity will be spread into the grid. When there is no sunlight to give PV voltage at night, the power grid will supply all of the ...

This article proposes a method of using medium voltage PV grid-connected converters to support the transient voltage caused by commutation failure in the LCC-HVDC system, which actively ...

Traditional large-scale PV medium-voltage (MVAC) grid-connected systems mostly adopt centralized large-capacity inverters and line frequency transformers because of ...

To kick-off its new field of research, "Medium Voltage - A Resource-Efficient Way to Interconnect," Fraunhofer ISE will be presenting the world's first medium-voltage PV ...

The high-frequency common magnetic-link made of amorphous material, as a replacement for common dc-link, has been gaining considerable interest for the development ...

used in the photovoltaic (PV) power plants to feed the solar energy to a medium voltage grid (e.g., 6-36kV). The power transformers operated at frequencies of 50 or 60Hz are heavy, large, and ...

GCPVS1 represents the case where the PCC voltage is slightly reduced, just below the critical voltage, i.e. range 2; GCPVS2 represents the case where the PCC voltage is reduced to a ...

Because of the lack of regulation ability of small hydropower and the significant seasonal impact on its power supply capacity, as well as the low controllability of photovoltaic in medium ...

As part of the "MS-LeiKra" research project, a new system concept for the next generation of large-scale PV power plants is to be developed and validated on a laboratory scale, in which ...

Medium-voltage (MV) multilevel converters are considered a promising solution for large scale photovoltaic (PV) systems to meet the rapid energy demand. This article ...

The participation of photovoltaic (PV) plants in supporting the transient voltage caused by commutation failure in the line-commutated-converter-based high voltage direct current (LCC ...

Enormous quantities of raw materials are required for the conversion of the energy system, for example, in the form of copper and aluminum cables to ... Interconnect", Fraunhofer ISE will ...

The main goal of this review is to show the current state of art on photovoltaic cell technology in terms of the materials used for the manufacture, efficiency and production ...

Network topology for current study. There are 38 nodes across 13 feeders (F1 to F13) connected to 11 kV bus bar through two 33/11 kV, with 30 MVA transformers connected in parallel.

The planned expansion of photovoltaics requires large quantities of raw materials, including copper and aluminum for cables and transformers. In the »MS-LeiKra« project, a research team at Fraunhofer ISE has developed a string inverter ...
