Should I install my solar energy system on a pole mount?

But if you live in a remote location or otherwise have space, it may significantly reduce the installation cost by installing your solar energy system on a pole mount in an unused part of your yard. There may be other reasons you may want to consider a pole mount as an alternative to traditional flush mounts or solar racking on your roof.

How do I install a solar system?

You'll also need to choose how you want to install your system. There are two options: Standard ground-mounting: this uses a racking system, whereby standard solar panels are fixed to a metal frame in a kind of "rack". Pole mounting: solar panels are placed on a pole that elevates them higher off the ground compared to a standard racking system.

How many solar panels can a pole mount hold?

Solar installers and DIYers can use a solar pole mount by choosing either a top of the pole mount or side of the pole mount. Top of the pole mounts can hold up to 24 modules: A top of the pole mount is basically securing solar panels on a single pole, or several poles depending on the array size, directly on top of the pole.

Should I Mount my solar panels on the ground?

Mounting your solar panels on the ground comes with a range of benefits, affecting your home's energy supply and property's aesthetics. With a ground-mounted solar system, you can position and orient your panels to maximise the amount of sunlight they receive each day.
