What is the device structure of a silicon solar cell?

The device structure of a silicon solar cell is based on the concept of a p-n junction, for which dopant atoms such as phosphorus and boron are introduced into intrinsic silicon for preparing n- or p-type silicon, respectively. A simplified schematic cross-section of a commercial mono-crystalline silicon solar cell is shown in Fig. 2.

How do solar cells produce electricity?

Light shining on the solar cell will produce both a voltage and a current to generate electric power. A typical schematic diagram of a silicon solar cell is shown in Fig. 1. PV energy conversion in solar cells consists of two essential steps. First, a material in which the absorption of light generates an electron-hole pair is required.

How are a-Si solar cells made?

The a-Si is prepared via a low-temperature process, which allows the application of various polymer and flexible substrates during fabrication. Among the second-generation solar cells, the a-Si solar cells are the most developed.

What is the process flow of a crystalline silicon solar cell line?

Schematic process flow for an industrial crystalline silicon solar cell line. 1. The entrance interface is the wafer in a stack. As a first step the wafers are typically inspected for microcracks using infrared transmission.

How long does it take to make a silicon solar cell?

The traditional method of production required 90 kWh of electricity for each kilogram of silicon. Newer methods have been able to reduce this to 15 kWh/kg. This still means that, depending upon its efficiency and the location of the device, a silicon solar cell can take up to 2 years to generate the energy used to make it.

How is silica used in solar cells?

Silica is utilized to create metallurgical grade silicon (MG-Si), which is subsequently refined and purified through a number of phases to create high-purity silicon which can be utilized in the solar cells. The silicon is first extracted from beach sand. Sand mining is only carried out on a few numbers of beaches throughout the globe.
