

Small solar power station for home use

What are solar powered portable power stations?

These solar-powered portable power stations keep your batteries full during power outages and off-grid campouts. These days, gas-powered generators aren't the only option for charging on the go. Solar-powered generators--also called portable power stations--are a growing sector of the power market.

What is the best portable power station?

Built by California-based solar power experts Jackery, the Explorer 500 is just one of a series of their brilliant portable power stations. Whether you're going on a camping trip or working "off grid", this is the best solution for keeping your gadgets charged when you're not close to mains electricity.

What is a portable power station?

Also known as portable power stations, these rechargeable devices combine a backup battery with solar panels that harness energy from the sun (they can also be charged at a wall outlet or even off your car). The result is a quiet, zero-emission source of backup power that can help get you through your home's next electrical outage.

What makes a good solar power station?

One of the most important aspects of any solar power station is how well it can interface and charge from various types of solar panels. In some cases, a solar power station might not be able to accept different types of solar panels or may be locked to its own brand's solar panels through a proprietary connection.

How much does a solar power station cost?

You're looking for a mid-priced portable power station: EcoFlow's Delta 2 Max is just under \$2000 base, with an additional \$500 - 600 for the solar panels, and another \$1400 for an extra battery. It's pricy, but EcoFlow runs deals occasionally dropping that price a bit.

Should you buy a portable power station?

Larger units can also provide peace of mind in areas where power outages are a concern. Depending on output, many of these portable power stations can sustain household appliances the way a gas generator would. Run out of juice? Attach a few solar panels and you'll start recharging the power station immediately--no emergency fuel run necessary.

You want solar options: If you're looking for a high-capacity portable power station that can also recharge off the grid using the sun, the EcoFlow Delta 2 Max has fantastic solar panels...

For that, you'll need to upgrade to a fully installed home solar power system with at least \$10,000 worth of batteries. That said, mid-range appliances like air conditioners, ...
