Who is contact solar?

Rated 'Excellent' on TrustPilot, Contact Solar is a wholly owned subsidiary of EDF. The company is certified by the Microgeneration Certifications Scheme (MCS) and TrustMark Certified by the Government Endorsed Quality Scheme. Find out more and sign up to the Empower Exclusive tariff, and check eligibility for the tariff.

How much do solar panels cost to export?

Find out which energy companies have the best rates. The amount you can get paid for exporting energy from your solar panels varies from a paltry 1p to as much as 40p per kWh. That means that if you've got solar panels, choosing the best export tariff could earn you hundreds of pounds extra in payments every year.

How much does a solar export tariff cost?

In the current market, customers on this tariff are getting paid £1.28 per kWh exported at some times, where most SEG tariffs pay around 3p per kWh. Octopus Energy Group was the first UK company to launch a solar export tariff in 2019, following the abolishment of the Government-supported Feed-in-Tariff.

Is EDF offering £500 off new solar panels?

Following the recent acquisition of Contact Solar, EDF is offering £500 off new solar panel and battery installations for the first 500 customers, with nothing to pay until the installation is complete. EDF has launched a market-first solar tariff with daily off-peak discounts and zero standing charges or exit fees.

Can solar panels be profitable?

Installing solar panels and signing up to an SEG tariff is unlikely to be anywhere near as profitable as FIT rates were just a few years ago for two reasons: All energy suppliers with more than 150,000 customers are required to offer a Smart Export Guarantee tariff and a couple have voluntarily decided to offer them.

How can the solar industry help the UK's farmers?

The solar industry is also working closely with Britain's farmers to reduce their energy costs and improve the sustainability of their operations. To meet the UK government's net zero target, the Climate Change Committee estimates that between 75-90 gigawatts (GW) of solar power will be needed by 2050.
