

Solar panel installation direction

What is the Best Direction and angle for solar panels?

To find out, we used the MCS PV Output Calculator, which lets MCS-certified solar panel installers calculate the best direction and angle for panels anywhere in the UK. It reveals how much more, and less, energy a panel produces when facing north, south, east and west, and when tilted at various angles from the horizontal. Here's a quick summary:

Which direction should solar panels be mounted?

The best direction is to have your panels facing south, followed by west or east. You can position/optimize your panels on a flat roof using a mounting system. Bear in mind that the angle and direction changes depending on your location in the world. You can start designing your solar system here with our free tool.

What angle should solar panels be installed on a flat roof?

The best angle for a solar panel system in the UK is between 20° and 50°. At this kind of angle, your solar panels will be exposed to more sunlight, which will lead to more energy production and larger savings. If you want to install solar panels on a flat roof, you can still achieve the optimal angle by propping them onto a mounting system.

What angle should solar panels be installed in London?

For instance, the latitude of London is 51.5 degrees, but the optimum angle for solar panels in this city is 36 degrees. However, in the case of most rooftop solar panel installations, the angle of the solar panels is determined by the angle of the roof - there isn't much you can do to change it.

What is solar panel direction?

'Solar panel direction' refers to the orientation of solar panels specifically the cardinal direction at which they are positioned to face the sun. In the Northern Hemisphere, the optimal direction is typically true south allowing panels to capture the maximum amount of sunlight throughout the day. What Is The Best Angle For Solar Panels?

Where should solar panels be installed?

To maximise the output of solar panels, you will want to have them installed on a south-facing section of your roof. South-facing solar panels in the UK receive the most sunlight exposure, as the sun is in the sky the most in this direction.
