

Solar panels are ready to use

Are solar panels a good idea?

Installing solar panels is a great idea to increase your home's capacity for renewable energy, and possibly save money on your energy bills.

Are solar panels a good investment?

Buying solar panels is a long-term investment that should help cut your electricity bills and carbon footprint. But will they pay for themselves and earn you money? Solar panels are often marketed as a way to save money on electricity - and sometimes as a way to make money too.

Why should you choose a solar panel system?

Sunlight is free, so once you've paid for the initial installation, your electricity costs will be reduced. Solar electricity is low carbon, renewable energy. A typical home solar panel system could save around one tonne of carbon per year, depending on where you live in the UK.

Why do people install solar panels?

Solar panels are often marketed as a way to save money on electricity - and sometimes as a way to make money too. This is because you can get paid for the electricity they produce that you don't use. Of course, many people install solar panels for other reasons.

What if I have solar panels installed before 31 March 2019?

If you had solar panels installed before 31 March 2019, it's likely you'll be on a feed-in tariff (FIT). If so, you might already be getting paid more than what's below, but if you're currently on a variable SEG tariff, you're free to switch to another provider that'll pay you more.

Should you buy a solar PV system for your home?

Well-chosen solar panels can provide a reliable source of renewable electricity for decades, helping to slash your electricity bills and cut your carbon footprint. But buying an inappropriate solar PV system for your home could leave you out of pocket.
