How many watts can a solar panel power?

Most appliances should have an information panel showing their consumption in watts (W) or kilowatts (kW) - 1 kW is 1000W. If your solar panels are generating over 1,200W at a particular time, you would be able to power a 300W fridge-freezer, an 800W microwave and a number of small appliances like your broadband router and LED bulbs.

Do solar panels need a battery?

There are two problems here. First, you won't be able to run these appliances at night. No sun, no solar power to run these devices. Second, solar panel performance will dip when it's overcast or raining. If it rains for several days or winter sets in, solar panels won't be as efficient no matter the size. A battery solves both problems.
