Solar power group Svalbard and Jan Mayen

Svalbard and Jan Mayen (Norwegian: Svalbard og Jan Mayen, ISO 3166-1 alpha-2: SJ, ISO 3166-1 alpha-3: SJM, ISO 3166-1 numeric: 744) is a statistical designation defined by ISO 3166-1 for a collective grouping of two remote jurisdictions of Norway: Svalbard and Jan Mayen.

Store Norske Energi, a state-owned energy company based in Longyearbyen, is testing whether solar energy could be used to transition Spitsbergen to emissions-free, hybrid energy. The company has installed 360 solar panels ...

The study investigates the potential and the design challenges of Polar solar power plants through field measurements of a small-scale solar power plant with modules facing both sky and...

Norway has installed the world"s northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter. The pilot project could help remote...

Svalbard and Jan Mayen, though remote, present a unique set of economic challenges and opportunities. As a consulting company, we [...]

Svalbard and Jan Mayen, with their unique geographical and environmental characteristics, offer promising opportunities for emerging industries and investment prospects. [...]

Svalbard Airport Used Maxeon Solar Panels. Find out how SunPower is helping Svalbard Airport to remove 70 metric tonnes of carbon emissions here.

Store Norske Energi, a state-owned energy company based in Longyearbyen, is testing whether solar energy could be used to transition Spitsbergen to emissions-free, hybrid energy. The company has installed 360 solar panels along with a battery bank and thermal storage system at Isfjord Radio, an old shipping radio station.

In the remote Svalbard archipelago of Norway, situated in perpetual winter darkness, a ground-breaking project has been completed: the installation of the world"s northernmost ground solar panels. This innovative initiative holds the potential to assist isolated Arctic communities in their transition to clean energy.

Installing solar panels in a place that experiences around five months of complete darkness might seem counterintuitive, but a new initiative in the Svalbard archipelago is hoping to generate clean power using the technology.
