

Will Spain raise its share of renewables by 2030?

According to a draft government report issued in June, Spain's goal is to raise the share of renewables to four-fifths by 2030. The new climate plan includes higher targets for solar and wind power capacity as well as energy storage.

How did renewables affect Spain's electricity mix?

The installation of photovoltaic (PV) plants beginning in 2007 played a key role in this increase, doubling the renewables' share in Spain's electricity mix from 20% in 2008 to 40% in 2013. After this period of growth, the share of renewables in Spain's electricity generation leveled off, reaching 37% by 2019.

Does Spain still generate more electricity from renewable sources?

Spain continues to generate more electricity from renewable sources as its renewable share of electricity rose to 50.8 percent in 2023 from 42.2 percent in 2022. According to a draft government report issued in June, Spain's goal is to raise the share of renewables to four-fifths by 2030.

How does wind power affect electricity production in Spain?

In the early 2000s, the growth of wind power contributed to an increase in Spain's renewable electricity production. By 2019, wind and solar energy made up 21% and 6% of total electricity generation, respectively.

Does Spain need wind power?

Spain has long been a leader in renewable energy, and has recently become the first country in the world to have relied on wind as its top energy source for an entire year. The country is attempting to use wind power to supply 40 percent of its electricity consumption by 2020.

Will Spain achieve climate neutrality by 2050?

With the aim of achieving climate neutrality by 2050, the Spanish energy sector is undergoing a rapid transition. For instance, the renewable auctions planned by the Spanish government will award at least 2.9 gigawatts of renewable energy per year to interested parties until 2026.

Spain's total wind generation capacity, its prime renewable source in recent years, has doubled since 2008. Solar energy capacity, meanwhile, has increased by a factor of eight over the same...

Spanish solar energy developer Alter Enersun on Monday announced that it has signed a long-term power purchase agreement (PPA) that will underpin the construction of a 25-MW/30-MWp solar self-consumption plant in Huelva, southwestern Spain.

Spain is advancing Europe's energy autonomy with Iberdrola's renewable energy projects, supported by a EUR1 billion loan from the European Investment Bank in a deal signed in June 2023. Iberdrola plans to build

19 solar photovoltaic power ...

Spain has released its draft report on its climate program goals and expects to increase renewable energy to 80 percent by 2030, doubling its capacity of wind power, among other increases in renewable technologies. Wind, however, has a massive waste problem that is looming in Spain.

Renewable energy includes wind, hydro and solar power, biomass and geothermal energy sources. Spain has long been a leader in renewable energy, and has recently become the first country in the world to have relied on wind as its top energy source for an entire year.

Spain has released its draft report on its climate program goals and expects to increase renewable energy to 80 percent by 2030, doubling its capacity of wind power, among other increases in renewable technologies. ...

Last year, Spain relied on fossil fuels for 29% of its electricity. Its per capita emissions were almost half the global average and three times lower than their peak in 2005. Coal generation has collapsed over the last two decades, declining from 36% of Spain's electricity in 2000 to less than 2% in 2023.

Most of the renewable energy consumed in Spain is used in electricity generation, while the transportation and the heating and cooling sectors hold smaller shares.

Last year, Spain relied on fossil fuels for 29% of its electricity. Its per capita emissions were almost half the global average and three times lower than their peak in 2005. ...

The Huelva-based metallurgical company Atlantic Copper, a leader in the manufacture of high-purity refined copper in Spain, and Alter Enersun, a benchmark in the renewable energy sector, have signed a long-term strategic agreement for the purchase and ...

The industry and energy transition index measures and assesses energy transition and industrialization in Portugal and Spain. This evolution is measured every six months, tracking the progress of seven energy transition KPIs and six industrialization indicators against their historical progress and defined targets for 2030.

The industry and energy transition index measures and assesses energy transition and industrialization in Portugal and Spain. This evolution is measured every six months, tracking ...

Spanish solar energy developer Alter Enersun on Monday announced that it has signed a long-term power purchase agreement (PPA) that will underpin the construction of ...

The Huelva-based metallurgical company Atlantic Copper, a leader in the manufacture of high-purity refined copper in Spain, and Alter Enersun, a benchmark in the renewable energy sector, have signed a long-term strategic agreement for the purchase and sale of green energy (Power Purchase Agreement or PPA) for the

construction of a 30 MWp ...

In December 2021 Spain had a capacity of 4.1 GW using coal as the energy source, in 2022 consumption was 6.5Mt, although the plan is to phase coal out by 2030. Algeria is Spain's largest natural gas supplier. Amid the deterioration of relations with Morocco, Algeria decided not to renew the contract of the Maghreb-Europe Gas Pipeline

Renewables investor Bruc Energy and Alter Enersun have agreed to buy 55% of 12 PV power plants in Spain totaling 550 MW.
