How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

How many solar panels are installed a week in the UK?

A step-by-step explanation of the simple solar panel installation process. More and more households in the UK are turning towards solar panels for their energy production. Over 3,000 installations are being carried out each week according to trade association Solar Energy UK.

How do solar panels connect to a house?

Solar panels are connected to your house in two ways: an electrical connection and a mechanical connection. Here's how both of these work, and what it means for your house. Your installer will connect the solar panels to the inverter through a series of wires that will travel through your roof.

How much does a solar panel system cost?

Solar electricity is low carbon, renewable energy. A typical home solar panel system could save around one tonne of carbon per year, depending on where you live in the UK. That's the equivalent of driving 3,600 miles, or from London to Bristol 30 times. The average domestic solar panel system is 3.5kWp and costs around £7,000.

How do solar panels work on a flat roof?

Solar panels work best when angled towards the sun, so panels on flat roofs are normally tilted up to help maximise energy production. It's important that any solar panel system maintains the integrity of the roof covering to keep it watertight. For this reason, many systems are weighted down rather than fixed through the roof covering.
