Why do people choose solar panels?

Cutting your electricity bills and your carbon footprint are two of the biggest reasons people choose to install solar panels. How you use your solar panels is key to doing both. Our tips - gathered from experienced solar panel owners and experts - will help you maximise the benefits of solar panels.

What is a solar panel used in a home?

used in a home. Here are some quick definitions to help you. Solar photovoltaic (PV) systems are made up of several panels. Each panel has many cells made from layers of semi-conducting material, usually silicon. When light shines on material, it creates a flow of electricity. Solar panels don't need direct sunlight and can work on cloudy days.

Are solar panels a good idea?

cheaper bills for years to come. Reduce your carbon footprint By harnessing low carbon solar electricity, a typical home solar panel system could save around 800kg of carbon a year depending on where you live in the UK. This makes solar a great way to cut your carbon footprint.

Are solar panels effective in the UK?

Year-round efficiency: Solar panels can be efficient year-round in the UK, despite the country's reputation for cloudy weather. Advancements in solar panel technology have made them increasingly effective, even during the winter months. Low maintenance: After installation, solar panels demand little maintenance.

What is the best type of solar panel?

The best type of solar panel is monocrystalline. They're more efficient than any other panel currently on the market, meaning you'll be making the best use of your roof space. And they have longer lifespans than all their competitors, which boosts their return on investment beyond that of polycrystalline panels or solar tiles.

How do solar panels work in the UK?

Dependent on sunlight: Solar panels can generate electricity without direct sunlight; however, they are more efficient during peak sun time in the day. Specific solar panel placement: The best roof direction for solar panels in the UK is southwards with a 5° to 7° westward tilt.
