

What to learn about microgrids in college

Do university campuses have microgrids?

Microgrids on campuses face challenges in the instability of power production due to meteorological conditions, as the output of renewable sources such as solar and wind power relies entirely on the weather and determining the optimal size of microgrids. Therefore, this paper comprehensively reviews the university campuses' microgrids.

Why do colleges need a microgrid?

Microgrids offer colleges a way to keep critical electricity flowing during power outages, increase use of renewable energy, pursue climate goals, and better optimize energy supplies and campus loads-- offering savings potential to free up funds for other priorities.

What is microgrid knowledge?

Microgrid Knowledge prepared this report, in partnership with Siemens, to help college and university decision-makers better understand microgrids and the benefits they provide. What is a microgrid? A microgrid is a self-sufficient energy system that serves a discrete geographic footprint, such as a business complex, campus or community.

What are the benefits of a microgrid?

This ability to island produces the hallmark benefits of a microgrid: reliability, grid independence, and resilience. Colleges and universities with microgrids are able to keep the power flowing, at least to critical loads, even when their neighbors are in the dark.

Does a microgrid make a college a draw for climate conscious students?

More than half (63%) of students surveyed for the Princeton Review's 2018 "College Hopes & Worries Survey" reported that information about a college's commitment to the environment would influence their application or enrollment decisions. A microgrid on campus makes the college a draw for today's climate conscious students.

Can microgrids help prepare the workforce for a new energy economy?

This paper explains how microgrids help flip these problems into opportunities to prepare the workforce for the emerging new energy economy, while yielding low cost, reliable and clean sources of energy.
